

# Marine Air Conditioning

COMFORT WITH QUALITY

*Why allow summer or winter to degrade the comfort in your boat ?*

*Custom designed Climate Control is just a phone call away: for advice, engineering or a complete turn-key installation.*

## Luxury Comfort

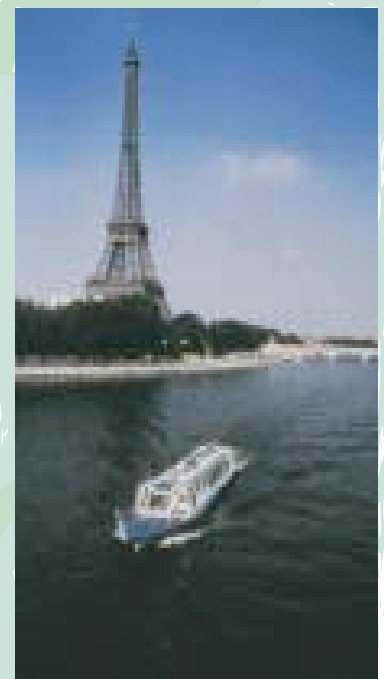

*The first thing in a Stream Marine system is the design quality and attention to detail.*

*Innovative design, lateral thinking, and integration of the different disciplines combine to give tidy and silent systems that go on working reliably.*

*Enjoy whisper-quiet heating and cooling in cabins, saloon and bridge. Digital display of temperature and fan speed. Set the temperature and forget it's there - just relax and enjoy !*

*Air outlets in fine woods, granite, stainless and other materials. Digital controls hidden from view and designed into your interior plan - the ultimate climate control system*

All refrigerants used are compatible with the environment, and readily available. We recommend systems are checked by qualified engineers once a year; filters and strainers may be checked by crew as required.

## Standard Systems

### Air Conditioning Electrical Power

Many smaller boats require more electrical power for cooling and heating than for other uses - it makes sense to specify a combined generation and climate control system.

Design, supervision and installation assistance is available to co-ordinate with your in-house engineering staff.

We operate trailable workboats to access your moorings for service and to evaluate the products we endorse.

*Smaller vessels can benefit from standard unitary or split type air conditioning and heating units.*

*On a Mooring ?  
We come to you !*
